dyson airblade

The fastest, most hygienic hand dryer.

The Dyson AirBlade™ is a new type of hand dryer that wipes hands dry with a high velocity blade of air. It's the fastest, most hygienic hand dryer. It uses less energy too (up to 83% less !), so it's better for your business and the environment.

Dyson AirBlade™ dries hands in just 10 seconds. It does this by releasing pressurised air travelling at over 400 miles per hour through an aperture the width of an eyelash (0.3mm)

The blade of air effectively strips the excess water from hands to leave them completely dry.

Your customers spend less time waiting for their hand dryer to work, and you spend less money paying for it.

The Dyson Digital Motor is a long-life, low-energy electric motor. It doesn't rely on the brushes or fixed magnets used in other hand dryer motors. It is digitally switched 6000 times per second and spins at 88,000 rpm, that's faster than a Formula 1 racing car engine. but uses much less energy !

The silver anti-microbial additives in the BioCote® integrated into its surfaces inhibit bacterial and fungal growth by 99.9%.

Noise suppression

Precisely tuned silencing technology is integrated into the motor housing and ducting to reduce air noise.

HEPA filtration

Lifetime filter removes over 99.99% of bacteria from the air used to dry hands, so only clean air is used.

The filter has over 600,000mm² of High Efficiency Particle Arrestor (HEPA) filter impregnated with antimicrobial additives.

The Dyson AirBlade is the only dryer approved by the British Skin Foundation.

Dimensions :	h640 x w305 x d250(mm)
Electricity Supply :	230V, 50Hz
Current Consumption :	7A @ 230V
Nominal Output :	1600W
Drying Time :	Approx 10 seconds
Motor Speed :	Approx 88,000 rpm
Casing AHD-DAB01 :	Die Cast Aluminium
Casing AHD-DAB03 :	Polycarbonate

"The Royal Institute of Public Health considers that the Dyson AirBlade is a significant step forward in hand dryer technology and hygiene."

"The BSF welcomes Dyson's approach to promoting skin health and hand hygiene through its revolutionary hand dryer."
